Author Note

Assoc. Prof. Dr. Sande Smiljanov serves as Head of the Department for Protocol Events and Activities at the Ministry of Internal Affairs of the Republic of North Macedonia and is Director of the World Protocol Academy — Institute for Protocol, Diplomacy, Public Communication & Security Studies. The views expressed are solely those of the author and do not necessarily reflect the views of any public institution.

ABSTRACT / РЕЗИМЕ

This Protocol Note offers a source-disciplined analytical overview of the protocol, ceremonial and diplomatic-procedural dimensions of the 52nd G7 Summit held in Évian-les-Bains, French Republic (15–17 June 2026). The document examines the geopolitical selection of venue, digital security innovations, Swiss arrival coordination, arrival protocol architecture (including helicopter transfer), round-table communication geometry, family photo semiotics, informal summit diplomacy, participant composition and protocol precedence, bilateral activities, and the analysis of specific protocol gestures (the Trump–Brigitte Macron greeting sequence and the Merz–Trump gift). The Note clearly separates verified facts, visual observations and WPA analytical assessments, and remains open to correction. It also institutionalises the Protocol Note genre within the WPA protocolometry matrix.

Keywords: протоколарна белешка; протоколометрија; PSPI / ИПММ; Г7 Самит; Евијан ле Бен; церемонијална архитектура; мултилатерален протокол; невербална дипломатија; тактилна протоколарна асиметрија; персонализирана дипломатија на подарокот; тркалезна маса; WPA.

Keywords: protocol note; protocolometry; PSPI; G7 Summit; Évian-les-Bains; ceremonial architecture; multilateral protocol; non-verbal diplomacy; tactile protocol asymmetry; personalised gift diplomacy; round table; WPA.

0. Protocol Note as a WPA Genre · Протоколарна белешка како WPA жанр

A WPA Protocol Note is a short, source-disciplined analytical format of the World Protocol Academy, designed for rapid assessment of a concrete protocol, ceremonial or diplomatic-procedural event. It is not political commentary, a media report or a ranking. It is an applied protocol analysis that distinguishes facts, visual observations, WPA assessments and the limitations of the analysis.

WPA MATRIX

- Protocol is absolute. / Протоколот е апсолутен.
- What is absolute can be measured. / Тоа што е апсолутно — може да се мери.
- What is measured must be shown. / Тоа што се мери — мора да се покаже.
- What is shown remains open to correction. / Тоа што се покажува — отворено е за исправка.

POSITION IN THE WPA SYSTEM

- PSPI (Protocol State Performance Index): measures concrete events — state visits, ceremonies, summits.
- WPA Institute Index: measures institutions — research, programmemes, certification, transparency.
- WPA Protocol Note: a short, public, correction-open analytical record linked to PSPI logic.
- PIA · Protocol Impact Assessment: a sub-tool for estimating the impact of protocol innovations — a module within the Protocol Note, not an independent index.

1. Introduction and Methodological Framework

1a Genre Definition

The Protocol Note is an analytical genre designed for the methodologically disciplined treatment of a concrete diplomatic event. It is more concise than a full academic study and more substantive than a media report, grounded in protocol methodology and a clear distinction between observable fact and analytical assessment. It operates on three levels: (a) normative-protocol, (b) descriptive-ceremonial, and (c) interpretive-semiotic.

1b Sources, Corpus and Limitations

The analysis rests exclusively on publicly available sources: official communications, photographic and video documentation (Republic Digital, AFP, Rudaw, DRM News/YouTube), media archives (The Hindu, SWI Swisinfo, admin.ch) and comparative protocol literature. No internal diplomatic records were consulted. Visual sources permit analysis of spatial arrangement, movement sequences and gestural patterns, but do not always allow reliable reconstruction of protocol intent. Conclusions of an interpretive nature are labelled accordingly.

1c Theoretical Frameworks

The analysis draws on: the semiotics of diplomatic gesture (Cohen, 1987); the theory of non-verbal communication (Knapp & Hall, 2013); the concept of symbolic capital (Bourdieu), applied to venue selection and personalised gestures; and the institutional study of summit protocol (Berridge, 2015).

1d Methodological Framework

Political, economic and security content falls outside the scope of this analysis in accordance with the principle of protocol separation. The analysis rests on three pillars: (1) semiotics of diplomatic gesture; (2) institutional analysis of multilateral ceremony; (3) comparative review of protocol precedents — the G8 Summit in Évian (2003), the G7 Summit in Biarritz (2019) and the G7 Summit in Cornwall (2021).

2. Host State and Ceremonial Venue

FACT

The 2026 G7 Summit was held under the chairmanship of the French Republic. President Emmanuel Macron selected Évian-les-Bains — a small Alpine town on the shore of Lake Geneva in the department of Haute-Savoie — as the venue for the 52nd Summit.

WPA ASSESSMENT

The selection of Évian-les-Bains may be interpreted as a deliberate protocol logic of venue selection. The location carries a dual historical memory (*lieu de mémoire*): the Évian Accords (1962) and the G8 Summit (2003). The use of historically resonant venues is a documented instrument for enhancing the host's symbolic capital.

SECURITY ZONES — FACT

- Red Zone: QR-coded dynamic access (portal pass-g7.gouv.fr), reserved for leaders and their delegations.
- Blue Zone: Extended zone for accredited media, technical staff and accompanying diplomatic personnel.

WPA ASSESSMENT

The use of a QR-coded access system represents a notable innovation: it enables real-time dynamic access control without reliance on physical accreditation cards within the perimeter. WPA assesses this as likely to inform the security protocol of future G7, G20 and NATO summits.

2a. Arrival Protocol Logistics — Swiss Coordination

FACT

The principal arrival point for leaders was Geneva International Airport — on Swiss, not French, territory. Switzerland temporarily reintroduced border controls on its internal borders with France for the period 10–19 June 2026. Media coverage of arrivals was organised through an official pool: AFP, AP, Reuters and Keystone-SDA/ATS.

VERIFIED WITH LIMITATION

According to publicly available sources, the President of the Swiss Confederation was present in a protocol reception role at Geneva Airport. The precise format of the reception has not been fully documented in the official sources available for this analysis.

WPA ASSESSMENT

A situation in which the host state (France) shares the physical arrival reception with a third country (Switzerland) on account of geographic necessity is rare and protocol-significant. It requires coordinated bilateral logistics and presents an instructive case for comparative protocol studies.

26. Arrival Protocol Architecture — Helicopter Transfer

FACT

Indian Prime Minister Narendra Modi arrived at the summit venue by helicopter transfer — a mode of arrival verified through media video documentation and official Indian communications.

VISUAL OBSERVATION

Video documentation shows a brief and precise movement sequence: the helicopter landed in close proximity to the conference facility. The arrival was temporally compact, with minimal transit between the landing point and the working session venue.

WPA ASSESSMENT

Helicopter transfer to a summit venue is an example of integrated logistical-protocol architecture, combining several functions simultaneously: time efficiency, a controlled arrival environment, route security separation and minimised ground exposure. The spatial proximity between the landing point and the working rooms is protocol-relevant: it reduces the transit period during which the leader is outside the strictly controlled zone.

The use of helicopter transfers at multilateral summits is observable in the protocol practice of countries with high security profiles. In the context of Évian 2026, this arrival architecture reflects both the complex terrain logistics of the venue (Alpine setting, restricted road access) and the priority of efficient summit-level time management.

LIMITATION

This analysis is based on video documentation and media reports. Specific security procedures and internal coordination are outside the scope of this analysis and are not documented in publicly available sources.

3. Composition of Participants and Protocol Precedence

A. PERMANENT G7 MEMBERS — FACT

Permanent members in alphabetical order according to the host language (French): Canada, France (Chair), Germany, Italy, Japan, the United Kingdom, the United States of America.

B. EU — FACT

The European Union participated as an institutional party with special status, represented by two officials of differing protocol rank: António Costa — President of the European Council (higher protocol rank), and Ursula von der Leyen — President of the European Commission.

C. INVITED LEADERS — FACT

- Brazil — President Luiz Inácio Lula da Silva
- Egypt — President Abdel Fattah el-Sisi
- India — Prime Minister Narendra Modi
- Kenya — President William Ruto
- South Korea — President Lee Jae Myung (이재명)
- Qatar — Emir Tamim bin Hamad Al Thani
- United Arab Emirates — President Mohammed bin Zayed Al Nahyan
- Syria — President Ahmed al-Sharaa (reported attendance; pending official verification)
- Ukraine — President Volodymyr Zelenskyy

LIMITATION

Syrian attendance is reported through multiple media sources but has not been confirmed in an official G7 document available for this analysis. WPA does not apply absolute formulations. The reported declined invitation of Saudi Arabia has not been confirmed in an official source and has not been included in this Note.

D. PROTOCOL HIERARCHY — WPA ASSESSMENT

The G7 format equalises all participants under the designation G7 Leader, regardless of constitutional rank. Invited leaders enjoy functional equality of status within the thematic sessions for which they are invited. Ukraine's participation in the working sessions is characterised by WPA as ad hoc protocol equivalence — a WPA assessment, not official terminology.

4. Pre-Summit Protocol Activity in Nice

FACT

On 14 June 2026, host Macron organised a pre-summit innovation forum in Nice, at the historic Villa Kérylos. The event included a bilateral meeting with Indian Prime Minister Modi.

WPA ASSESSMENT

The pre-summit forum may be interpreted as a deliberate two-phase diplomatic strategy: informal initial contact → formal summit. Villa Kérylos functioned as a protocol antechamber — a space for informal preparation before the principal ceremony. The joint photograph ('selfie') of the host and guest is a gesture that, in contemporary diplomatic practice, may be read as a deliberate signal of informality and partnership.

5. Protocol Format of Working Sessions

The Summit operated through three protocol-distinct session formats:

- **1. Plenary sessions:** Formal format including all leaders, chaired by the host. The order of contributions (ordre de parole) is determined by the G7 General Secretariat.
- **2. Expanded working sessions:** Modular participation of invited leaders according to thematic relevance.
- **3. Bilaterals:** Parallel meetings between individual leaders. Management of the bilaterals agenda is a key logistical task of the host protocol.

The working sessions were supported by the Sherpa channel — each leader's personal diplomatic representative, who coordinates draft communiqués, protocol procedures and bilateral agendas.

ROUND TABLE AND SPATIAL COMMUNICATION ARCHITECTURE

VISUAL OBSERVATION

Official photographs and video material from the working sessions document the use of a round table (table ronde). All leaders are arranged along a circular line; there is no protocol 'head' or 'foot' of the table.

WPA ASSESSMENT

A round table reduces visual dominance but does not eliminate formal protocol precedence. The chair continues to conduct the session and control the order of contributions. The circular arrangement is a deliberate spatial message of collective participation and equal access to the discussion — an element of ceremonial architecture specific to the G7 format.

The modular expanded sessions create additional spatial dynamics: the entry and departure of invited leaders is itself a protocol signal of their ad hoc status within the format.

6. Notable Protocol-Specific Observations

DATE ADAPTATION — VERIFIED WITH LIMITATION

According to several media sources, the Summit was moved by one day (15–17 June instead of 14–16 June) to avoid coinciding with President Trump's birthday. Absent official confirmation, this remains at the level of reported. Should it be confirmed, WPA assesses it as a rare adaptation to the personal calendar of a principal participant.

OFFICIAL FAMILY PHOTO — SEMIOTICS

FACT

The official family photograph of the leaders was taken on 15 June 2026. Those present included: Macron (centre), Trump (USA), Starmer (UK), Carney (Canada), Meloni (Italy), Merz (Germany) and Takaichi (Japan).

VISUAL OBSERVATION

President Macron occupies the central position — the host position. President Trump is positioned on one side of the host, and Prime Minister Modi on the other.

WPA ASSESSMENT

The positioning on either side of Macron may be interpreted — within a protocol-semiotic analysis — as a visual expression of the summit's key diplomatic axes: transatlantic (Trump) and Global South/Indo-Pacific (Modi). This interpretation is a WPA analytical assessment based on visual observation; it does not represent an official message from the organisers and cannot be confirmed without access to the underlying protocol decisions.

The Family Photo arrangement follows established protocol principles: the host at the centre, permanent members positioned immediately adjacent according to seniority. Invited leaders are placed at the wings or in the second row, reflecting their temporary protocol status.

LIMITATION

The precise seating algorithm is determined by the host's protocol secretariat and is not publicly documented. WPA makes no claim to knowledge of the internal positioning decisions.

INFORMAL SUMMIT DIPLOMACY — FACT AND WPA ASSESSMENT

FACT

During breaks in the working sessions, an informal exchange was documented between several leaders: Giorgia Meloni (Italy), Ursula von der Leyen (European Commission), Keir Starmer (UK) and António Costa (European Council) engaged in a conversation about smoking cessation. This exchange is documented through media reports.

WPA ASSESSMENT

This conversation had no direct connection to the formal summit agenda. It is, however, protocol-significant in a broader sense: informal pre-session and inter-session communication between leaders forms part of the overall diplomatic architecture of the summit. These moments of humanised leadership interaction — occurring outside the formal ceremonial space — build the interpersonal familiarity that is subsequently brought into the formal working sessions. WPA designates this as informal summit diplomacy — a documented category in protocol studies.

CONSTITUTIONAL DISTINCTION: HEADS OF STATE AND HEADS OF GOVERNMENT — WPA ASSESSMENT

Trump (USA) and Macron (France) are Heads of State. Merz (Germany), Starmer (UK) and Takaichi (Japan) are Heads of Government. In international protocol, Heads of State generally take precedence. The G7 format successfully equalises all participants under the common designation G7 Leader — a feature that makes the format distinctive in international ceremonial practice.

EXTERNAL DIPLOMATIC CONTEXT — LIMITATION

For the purposes of this Protocol Note, external diplomatic developments reported during the summit period in relation to the Middle East region are mentioned solely as an illustration of the way in which external diplomatic events may influence summit agenda management, media choreography and protocol adaptation. The geopolitical, military and security dimensions of those developments fall outside the scope of this Note.

7. Protocol Analysis of the Ceremonial Greeting

SOURCE BASIS

Video sequence recorded and published by Republic Digital, Évian-les-Bains, 15 June 2026. The analysis rests exclusively on visually observable elements. The source is a media video record, not an official protocol document.

PHASE 1 (FRAME ~0:52) — VISUAL OBSERVATION

During the greeting, President Trump established contact with Brigitte Macron by grasping only her fingertips, rather than her full hand.

PHASE 1 — WPA ASSESSMENT

In the protocol and non-verbal communication literature, such contact — described as a finger-tip hold — may be read as a courteous but limited tactile gesture, typical in greeting the partner of a head of state as distinct from a peer leader. The analysis is semiotic, not psychological.

PHASE 2 (FRAMES ~0:58–0:59) — VISUAL OBSERVATION

President Trump retained his grip on the hand of the host's wife whilst continuing to speak and turning his body towards her.

PHASE 2 — WPA ASSESSMENT

The recorded sequence is suggestive of a pattern referred to in the body diplomacy literature as a pull-and-hold. It may be read as an attempt to extend the tactile interaction space. An important limitation: the visual source does not allow reliable reconstruction of intent — this analysis is a semiotic interpretation, not a psychological assessment.

WPA ASSESSMENT — LIMITATION

The partner or spouse of a head of state does not enjoy the same protocol status or the same norms of physical contact as the head of state. The retained grip creates a visual asymmetry with potential media resonance. WPA characterises this as tactile protocol asymmetry — a WPA assessment based on visual evidence, open to correction.

8. Protocol Analysis of the Bilateral Gift — Merz / Trump

SOURCE BASIS

Photographic documentation by Agence France-Presse (AFP), published through Rudaw Media, 15–17 June 2026.

FACT

German Chancellor Friedrich Merz presented President Trump with a German national football jersey bearing the name TRUMP and the number 47. The presentation took place at the summit's working table.

WPA ASSESSMENT

The presentation of the jersey does not constitute a formal state gift in the strict sense — it is a political-symbolic gesture in a working context, documented by the media, without a formalised gift ceremony. Standard protocol provides that state gifts are presented in a dedicated ceremonial setting or through protocol chiefs. Nevertheless, in the semi-informal atmosphere of the G7, such flexibility is a known and observed practice.

The symbolic architecture of the gift is carefully conceived: the number 47 links it to the recipient's constitutional identity (47th President of the USA); the national jersey signals trust and closeness; personalisation renders the gift unique. WPA assesses this as a well-conceived example of personalised gift diplomacy.

The public display of the gift before the assembled leaders may be read as an act of protocol reciprocity — a non-verbal acknowledgement of the gesture's value.

86. Language Choice and Complimentary Diplomacy in Bilateral Meetings

8b.i Trump–Macron: The Deliberate Choice of the French Language

FACT

During the official bilateral statements to the media at the 52nd G7 Summit in Évian-les-Bains, President Macron addressed the press exclusively in French, notwithstanding his well-documented fluency in English and his known use of English in informal exchanges with President Trump.

WPA ASSESSMENT

Language choice in official diplomatic statements is a substantive protocol act. When a host leader of established linguistic competence deliberately selects the national language before the international media, this may be read — within a protocol-semiotic analysis — as a deliberate affirmation of state sovereignty and equal standing. The French Republic traditionally upholds the principle that French is a diplomatic language of historical continuity: the use of the national language at official ceremonies is consistent with this institutional position. WPA characterises this as sovereign language protocol — a documented category in diplomatic ceremonial practice.

8b.ii President Trump's Response — Complimentary Diplomacy in Public Address

FACT

During the official bilateral statements, President Trump publicly commented on the beauty of the French language before the assembled media, stating: That's the most beautiful language. I have no idea what he's saying, but it's the most elegant, most beautiful language. The statement is documented and widely reported through media archives, including C-SPAN.

WPA ASSESSMENT

The statement represents an instance of complimentary diplomacy in public address — an acknowledgement of the symbolic value of the host's language without engagement with its content. In protocol studies, such gestures are analysed within the framework of rapport diplomacy: the creation of a positive interpersonal atmosphere through public compliments that soften the formality of the diplomatic context. The fact that Trump acknowledged incomprehension of the content whilst emphasising the aesthetic value of the form makes this moment protocol-notable: attention is directed to the ceremonial sign (the language) rather than the diplomatic message.

LIMITATION

This analysis is based on publicly documented statements (media archives, C-SPAN). The intentions behind the language choice and the precise context of the remark cannot be reliably reconstructed from public sources alone.

8b.iii The Trump–Macron Handshake Diplomacy

VISUAL OBSERVATION

The bilateral meetings between Trump and Macron consistently attract analytical attention on account of their prolonged and visually intense handshakes, documented across multiple summits. The handshakes between the two leaders in Évian were captured through media video documentation and discussed in outlets specialising in body language analysis.

WPA ASSESSMENT

In the protocol and non-verbal communication context, the handshake between heads of state is a strictly regulated ceremonial element: it marks the commencement of official contact, establishes the tone of the meeting and — when prolonged and physically emphatic — may be read, within body diplomacy analysis, as an attempt to establish interactional balance. WPA notes that these Trump–Macron handshake patterns are documented across several summits and represent a notable feature of their bilateral diplomatic ceremonial. The analysis is semiotic, open to correction.

8B. Trump–UAE: Public Address, Complimentary Diplomacy and Protocol Forms of Address

FACT

On 15–16 June 2026, President Trump held a bilateral meeting with the President of the United Arab Emirates, Sheikh Mohamed bin Zayed Al Nahyan, on the margins of the 52nd G7 Summit in Évian-les-Bains. The meeting included official statements to the media, documented through multiple media channels, including DWS News/YouTube and the Khaleej Times.

8c.i The Titular Status of the President of the UAE

FACT

Mohamed bin Zayed Al Nahyan holds the official title of President of the United Arab Emirates and Ruler of Abu Dhabi. In the context of the UAE's constitutional structure — a federation of emirates — the protocol-accurate forms of address are President of the UAE or Sheikh Mohamed bin Zayed, not King. The distinction of forms of address according to a leader's constitutional status is a fundamental element of diplomatic protocol.

8c.ii The Use of Metaphorical Epithet in Public Address

FACT

During the official statements to the media, President Trump referred to the UAE President as a warrior, adding: He's a man of great respect. Everyone respects him and his country. The statement is documented through media archives (DWS News, Khaleej Times, June 2026).

WPA ASSESSMENT

The use of the metaphorical epithet warrior in public diplomatic address is notable on several grounds. First, it departs from the formal register of diplomatic language, though it is consistent with President Trump's documented practice of employing informal, direct language even in official diplomatic contexts. Second, the use of such an epithet towards a prominent ally in the presence of the international media functions as a form of public complimentary diplomacy: a public acknowledgement and validation of the partner's standing before a global audience. Third, the choice of warrior — rather than neutral epithets (leader, statesman, partner) — carries specific symbolism associated with resolve and strength, characteristic of Trump's diplomatic rhetoric. WPA characterises this as informal complimentary public address with a ceremonial function — a gesture that exceeds the formal bounds of diplomatic protocol but operates within the logic of rapport diplomacy.

8c.iii Public Expression of Gratitude — The Protocol Function

FACT

During the meeting, the President of the UAE publicly and directly expressed gratitude to President Trump. The statement is documented through media channels.

WPA ASSESSMENT

A public expression of gratitude from one head of state to another — particularly when delivered before the international media — is a protocol-significant gesture. It operates on several levels simultaneously: it affirms the value of the partnership, acknowledges the personal contribution of the recipient and creates a public record of

mutual obligation. In diplomatic ceremony, public acknowledgement is a documented form of protocol reciprocity — particularly significant when it occurs in a multilateral context, before an audience of other leaders.

LIMITATION

The geopolitical, military and security dimensions of the events referenced in the context of this meeting fall outside the scope of this Protocol Note, in accordance with the principle of protocol separation. This section focuses exclusively on the form, language and protocol function of the public statements.

9. Recommendations for Future Multilateral Formats

RECOMMENDATION 1 — DIGITAL SECURITY PROTOCOL

The QR-coded security systems deployed at Évian should be considered for implementation at future G7, G20, NATO and OSCE summits. Protocol services should integrate such systems into standard operating procedures for security ceremony management.

RECOMMENDATION 2 — CODIFICATION OF THE HYBRID MULTILATERAL MODEL

The participation of nine invited countries — including a post-conflict state and a country in active conflict — points to an evolution of the format. WPA recommends the formal codification of criteria for ad hoc participation in the G7 Secretariat's protocol guidelines.

RECOMMENDATION 3 — NON-VERBAL COMMUNICATION TRAINING

The analysis of the greeting sequence points to the need for specialist modules on tactile discipline and gesture semiotics in protocol briefings for leaders ahead of multilateral summits.

RECOMMENDATION 4 — PIA AS A SUB-TOOL

Protocol Impact Assessment (PIA) should continue to be developed as a sub-tool within Protocol Notes and PSPI-related analysis — not as an independent index. A standardised PIA framework applied retrospectively to a series of summits would provide a comparative corpus for protocol studies.

10. Protocol Conclusions and WPA Observations

- The selection of Évian-les-Bains may be interpreted as a deliberate protocol logic of venue selection, employing the historical memory of the place.
- The Nice forum (Villa Kérylos) is an example of a two-phase diplomatic strategy: informal antechamber → formal summit.
- Modi's helicopter transfer is an example of integrated logistical-protocol arrival architecture.
- The round table reduces visual dominance but does not eliminate formal protocol precedence.
- The positioning of Trump and Modi on either side of Macron may be interpreted — WPA assessment — as a visual expression of the summit's principal diplomatic axes.
- The informal conversation (Meloni, von der Leyen, Starmer, Costa) illustrates informal summit diplomacy — a documented category in protocol studies.
- The QR-coded security system (pass-g7.gouv.fr) is a notable innovation in digital security ceremony.
- Tactile protocol asymmetry in the Trump–Brigitte Macron greeting sequence is a WPA assessment based on visual evidence, open to correction.
- The Merz–Trump gift is a well-conceived example of personalised gift diplomacy.

SCIENTIFIC CONTRIBUTION

The scholarly contribution of this Note lies not only in the analysis of this particular summit, but also in proposing a reproducible method for the protocol reading of multilateral events — with a clear distinction between fact, visual observation, WPA assessment and limitation.

FUTURE RESEARCH

Recommended directions: (1) A comparative study of QR security systems across multiple summits (Évian 2026, Hiroshima 2023, Rio 2024); (2) Retrospective application of the PIA framework to ten or more summits to build a comparative corpus.

ANNEX A — PIA MATRIX

PIA · Protocol Impact Assessment is a sub-tool for estimating the symbolic, operational, media and diplomatic impact of protocol innovations observed at a concrete event. PIA is not an independent index; it is a module within the Protocol Note.

Innovation	Symbolic Capital	Operational Feasibility	Media Resonance	Diplomatic Reciprocity
QR-coded security zones	High	High	Medium	Low
Ad hoc equivalence — Ukraine	High	Medium	High	High
Gift diplomacy (Merz–Trump)	High	High	High	High
Protocol logic of venue selection (Évian)	High	Medium	High	Medium
Expanded format — 9 invited	Medium	Medium	High	Medium

Scale: Low = limited measurable effect; Medium = moderate effect; High = strong and immediate effect. Assessments are WPA interpretive estimates, not final quantitative scores.
